Art Unit: 2633

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-10, drawn to a delay equalizer, classified in class 333, subclass 18.
 - II. Claims 11-30, drawn to an optical transmitter, classified in class 398, subclass 201.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions group II and group I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because at least claim 11 is evidence claim. The subcombination has separate utility such as the subcombination can be used in an electrical audio signal processing system, arithmetic processing system, electrical transmission system, or other non-optical system.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
